# 10- CSS Preprocessor          (20 pts)

Build a page using SASS as the CSS preprocessor. You may take one of your better templates and redo it as a SCSS document. Include screenshots of all the required code in a PDF document so I can see that you successfully demonstrated each requirement.

## PARTIALS AND IMPORT                                                2

Break your CSS into separate source files and let COMPASS.app combine them for you using Import.

- ❏ _desktop,
- ❏ _tablet
- ❏  _phone
- ❏ Use import to combine these three files

## VARIALBES                                                          2

- ❏ Include at least 4 variables

## NESTING                                                            2

- ❏ Include Two instances of Nesting

## MIXIN                                                              2

- ❏ Include at least one mixin

## EXTEND/INHERITANCE                                                 2

- ❏ Include at least three examples of extend

## OPERATORS                                                          2

Include at least two math functions in your CSS.

## PDF DOCUMENTATION                                                  5

Please include in Canvas a PDF document that has a screen shot of your source code (similar to the example page) so I can verify that you met the requirements.

- ❏ PDF with screenshots
- ❏ Well labeled so I am not guessing

## LOOK AND FEEL                                                      3

How professional and polished does this look?

- ❏ Perfect CSS=3, Minor flaws = 2, Multiple mistakes = 1
