12-CSS Framework   20pts

So far you have been creating your own CSS for each of the templates you have made. Now your going to use the CSS of others for your work. In this unit you will use Foundation5 CSS framework. You will begin by downloading the full version of Foundation 5.

SETUP

❏ Create a folder called "12framework" on your local hard drive in the root of your subdomain for this class.

GRID   2

❏ Use multiple columns within a row that change for phone, tablet, desktop.

SWAPPING BACKGROUND IMAGES   2

❏ Change out a background image so that you are using an image optimized for each device.

TOP BAR   2

❏ Use the top bar for navigation and a search box
❏ Also make it sticky

BLOCK GRID   2

❏ Use the block grid to layout at lease 8 differently sized images

TABS   2

❏ Use the tabs to display at least four different pieces of content

THUMBNAILS   1

❏ Implement the large image thumbnails.

BUTTONS   2

❏ Create three different kinds of buttons

FORMS   2

❏ Build a simple form using Foundation 5 markup.

YOU PICK   2

❏ Choose any other feature of Foundation that looks interesting and add it to your site.

LOOK AND FEEL   3

How professional and polished does this look?

❏ Perfect CSS=3, Minor flaws = 2, Multiple mistakes = 1
